

Challenge the status quo: PIN-based dialing

Although audio conferencing underpins many critical communications, operational speedbumps can impact its effectiveness.

View the comparison table below to see how PIN-based dialing from Intellor can give you an advantage before, during, and after your next audio conference.

Operator-Assisted Connection		Intellor PIN-based Connection
Operator capacity is typically much lower than platform capacity.	Need capacity for your largest audience?	Yes. Collect the information you need from every caller – whether you expect 6 or 6,000.
Callers must wait for an operator to be connected to your call.	Need to know your VIPs won't get stuck on hold?	Yes. Callers use unique PINs to dial in – no waiting for an operator.
Not available	Need to know who's coming?	Yes. Access this report in real-time, at any time before your call.
Not available	Need to send reminders or information by email?	Yes. Send pre- (and post-) call emails to registrants
Visualizing callers may depend on call size and the vendor's visual interface	Need to know who's here?	Yes. Visualize every caller – whether you have a few or a few thousand.
Yes. You'll receive a report from your vendor when available.	Need to know who came?	Yes. Receive a report right after your call.

To take advantage of an audio conferencing service that removes complexity from the process allowing you to focus on the content, speak to Intellor.
